
Three point charges q_1 , q_2 , and q_3 lie along the x -axis at $x = -0.4$ m, 0 m, and 1.0 m, respectively. Calculate the magnitude and direction of electrostatic force on charge q_3 when

$$\begin{aligned}q_1 &= +1.3 \times 10^{-5} \text{ C}, \\q_2 &= -6.0 \times 10^{-5} \text{ C}, \text{ and} \\q_3 &= -5.7 \times 10^{-5} \text{ C}.\end{aligned}$$
