

Light #3

1. A *converging* lens has a focal length of 20.0 m. It is 60.0 m away from an antelope.

(a) What would be the distance of the image from the lens?

(b) What is the magnification of the image?

2. You place a penny under a converging lens of focal length 75 mm. You hold the lens 50 mm away from the penny.

(a) What would be the distance of the image from the lens?

(b) What is the magnification of the lens?

(c) if the diameter (height) of the penny is 19 mm, what will be the diameter (height) of the image?
