

An image is the point where light rays _____.

virtual images

rays of light appear to intersect at a location, but in reality there is _____ there.

_____ focused on a screen

real images

rays of light do _____ at a point in space

_____ focused on a screen

Equations for Locating Images

Thin Lens Equation:

Magnification Equation:

Variables & Sign Conventions

d_o distance between lens and object

d_i distance between lens and image

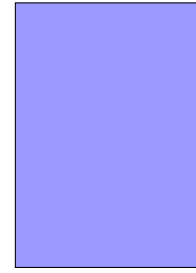

f focal length

h_o height of object

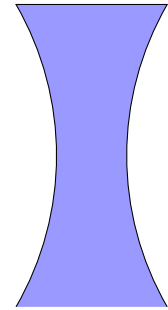

h_i height of image

m magnification

Consider a ray of light hitting glass:

Now, how could we shape a piece of glass to manipulate the direction of light?

How about curved mirrors? How could we shape them to manipulate the direction of light?
