
Task #1

You hang 0.5 kg of oranges on a grocery scale and the spring stretches 4 cm. Calculate the spring constant.

Task #2

When you hang 0.60 kg on a certain spring, it oscillates at 3.0 Hz. What will be the frequency if you take the 0.60 kg off and instead hang 0.38 kg on the spring?

Task #3

The springs of a 1700-kg car compress 5.0 mm when its 66-kg driver gets into the driver's seat. If the car goes over a bump, what will the frequency of oscillations be?
