

## Newton's First Law

An object maintains its state of rest or uniform motion in a straight line unless acted on by a net force.

An object maintains its \_\_\_\_\_ unless acted on by an \_\_\_\_\_

## Newton's Second Law

Acceleration is inversely proportional to mass, directly proportional to net force, and in the same direction as the net force.

$$F_{NET} = ma$$

\_\_\_\_\_ is equal to  
\_\_\_\_\_

## Newton's Third Law

When one object applies a force on a second object, the second object applies an equal and opposite force on the first object.

$$F_A = -F_B$$

Momentum is \_\_\_\_\_

## Newton's First Law
