

Name: _____

Period: _____

Mon, Jan 12

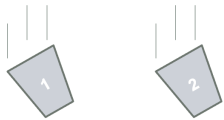

Warmup

1. Last class, we did the egg drop lab. The two main devices for protecting the egg were (a) a cushion or (b) a parachute. Explain how each protected the egg using impulse-momentum equation (written below).

$$F \cdot \Delta t = \Delta p$$

2. You drop two identical vases from the same height. Vase 1 lands on a pillow, and vase 2 lands on a concrete floor.
 - (a) Which one experiences a larger *impulse*?
 - (b) Which one experiences a larger *force*?

Explain both answers. Remember the impulse momentum equation above and the definition of impulse: $J = F \cdot \Delta t$.
