

Name: _____

Period: _____

Fri, Jan 16

Warmup

You have a quiz today. Try these two problems on your own. We will go over them before the quiz.

1. What is the velocity of the cannon above? The cannon starts at rest and then fires out the clown at 15 m/s. (If you can't read the picture, the cannon has a mass of 500 kg and the clown has a mass of 100 kg)

2. The clown (still traveling at 15 m/s) then hits a wall and comes to a stop in 0.85 seconds. What is the force acting on him?
