

Name:

Period:

Fri, Feb 6

Warmup

- Two cars are traveling down the highway. They have the *same mass*, but car #2 is traveling at triple the speed of car #1. Which car has the larger kinetic energy, and by how much?

- Two cars are traveling down the highway. They have the *same speed*, but car #2 has three times the mass of car #1. Which car has the larger kinetic energy, and by how much?

- Two cars are traveling down the highway. Car #1 has two times speed as Car #2, but Car #2 has three times the mass of Car #1. Which car has the larger kinetic energy, and by how much?

- What would happen to KE if velocity were cut in half?
- What would need to happen to velocity in order for KE to be cut by $1/16$?
- What would need to happen to mass in order for KE to be cut by $1/16$?
