
Task #1

Find the length of pendulum that has a period of 0.6 seconds.

Task #2

The shock absorber in a car is a spring that has a constant of 130 000 N/m. When the car goes over a bump, the spring oscillates 10.0 times in 7.0 seconds. What is the mass of the car?

Task #3

By how much is the spring displaced due to the mass of the car?
