

Waves #2

1. The wave below is traveling at 20 m/s. All measurements are in meters.

- (a) What kind of wave is this?
- (b) What is its amplitude?
- (c) What is the wavelength?
- (d) What is the frequency?
2. These two waves have the same velocity. Which one has a higher frequency? How can you tell?

Wave A 

Wave B 

3. Draw a wave with an amplitude of 1.5 m and a wavelength of 6 m.

Date:

Period:

The following problems are review of pendulum and spring math...

4. Find the length of a pendulum that oscillates 5 times in 6.5 seconds.

5. You hang 1.5 kg off of a spring that has a constant of 122 N/m.

(a) Calculate the displacement of the spring.

(b) Calculate the period of the spring.

(c) Calculate the frequency of the spring.
