***Breakstep Bridge* Mythbusters**

1. List and define any and all physics-sounding terms you hear in the video (specifically those that deal with oscillations, periodic motion, waves, vibrations, resonance, etc.).
2. Explain the premise of the myth (about what would have happened to the bridge to make it collapse and how that could happen) and how this relates to oscillating systems like waves.
3. Explain the experiment and how it was designed to test the myth.
4. Give a summary of the experiment; be sure to include how well the experiment worked, what the result was, why it happened, and what you learned.
