Research Project - Workday #2

Today is the last in-class workday on your project. You still have nearly a month to work on it, but do not expect any more extended periods of in-class work time.

Presentation Date

Write down the day that you are scheduled to give your presentation here: _____

Project Checklist

- ☐ Have I turned my Annotated Bibliography and made corrections to get my 20/20? Remember, your grade is frozen after Friday.
- ☐ Do I know my topic well enough that I can explain it in my own words?
- ☐ Do I know my topic well enough that I can answer questions about it?
- ☐ Does my project thoroughly cover the physics of my topic (not just the history or the biography)?
- ☐ Is my presentation 5-7 minutes?
- ☐ Do I have both a *visual aid* and a *presentation aid*?
- ☐ Are all my sources cited in my presentation aid? Even any new sources I've used? Remember, all sources need to be cited (although not annotated.)

Visual Aid

- You are to have one visual aid *which substantially contributes to understanding your topic*. (For example, a picture of Albert Einstein does not substantially contribute to our understanding of Einstein. A diagram of how the photoelectric effect—something he is famous for describing—works does substantially contribute.) A visual aid is distinct from your *presentation aid*.
- Examples of visuals include: a 3D model/diagram, a graph, a flow chart, an experiment, a diagram, a model, a comic book, a pop-up book, or a skit.
- Your visual should be something you've made, not just a Google Image. It can be based off of something you've found, but you should do something to make it your own.
- If you use or are inspired by any visuals you have found from another source, *you need to make sure that source gets cited*.
- You need to be able to explain your visual.

On Plagiarism and AI

This project needs to be *your work*. Please make sure to indicate the sources of all material (including images). However, even if you cite your sources, a presentation still counts as plagiarism there is too much use of others' words and not enough use of your own.

Please be very careful with AI. Although there *may* be times it can be helpful in the *early* parts of researching your presentations, you should stay far away from it while you are preparing your slides and your explanations. A presentation that has been significantly generated using AI is an exercise in academic dishonesty and will carry consequences.

Rubric

Creativity (15 points): Your project is not just a generic “book report”-style presentation. There is some level of creativity to it.

- ☐ Exceeds Standard (15/15)
- ☐ Meets Standard (13/15)
- ☐ Almost Meets Standard (11/15)
- ☐ Needs Work (7/15)

Effectiveness and Self Sufficiency (35 points): There is evidence that you know and understand what you are talking about and are not merely parroting something you read. (*If you are reading off of slides and are not able to answer questions about your project, your explanation is not self-sufficient.*)

- ☐ Exceeds Standard (35/35)
- ☐ Meets Standard (32/35)
- ☐ Almost Meets Standard (25/35) - Although the words are your own, your presentation seems more like a paraphrase of your sources than it seems like your own presentation.
- ☐ Needs Work (18/35) - You have not done enough to make the explanation “your own.”

Scientific Accuracy and Thoroughness (30 points): You thoroughly and accurately explain the ***science*** (not just the history) behind your topic.

- ☐ Exceeds Standard (35/35)
- ☐ Meets Standard (32/35)
- ☐ Almost Meets Standard (25/35) - Perhaps you could have gone into more depth. Perhaps everything you said was pretty good, but the organization and way you said it was a little hard to follow. Perhaps your explanation was mostly right, but showed a few misunderstandings in how your topic worked. Perhaps you weren’t as prepared for the Q&A session as you could have been.
- ☐ Needs Work (18/35) - Perhaps you focused more on historical and biographical details than on the science.

Your Visual [Image/Diagram/Picture/Model] (15 points): Your visual substantially contributes to understanding of the topic *and* is well explained. (A picture of a person does not count for this standard.)

- ☐ Exceeds Standard (15/15)
- ☐ Meets Standard (13/15)
- ☐ Almost Meets Standard (11/15) - Perhaps you have a very well done graphic but it could use some more explanation. Perhaps it is explained well but could use some more detail in the graphic itself.
- ☐ Needs Work (9/15) - Your visual is good, but it has just been copied and pasted from the internet
- ☐ Visual exists but does not meet standard (7/15)
- ☐ No visual is provided, except maybe some generic pictures (0/15)

Total Score: _____ / 100

If you look at the rubric, you will realize that if you meet all standards, you will get a 90%. Does that mean it is impossible to get a 100%? No, of course not. But perfect projects go above and beyond in multiple respects: they are remarkably well researched, they are very creative (something I have either not seen before or not seen completed nearly as well), and they really stick in my mind as outstanding projects. If you want a 100% you will need to work very hard and have a fantastic idea that you learn inside and out!!!
