Circular #4

1. A bicycle wheel of diameter 0.62 m rotates 25 times in 19.4 seconds. Calculate (a) the tangential velocity of a point on the outside of the wheel and (b) the rotational velocity of the wheel.
2. A rock in a sling is 0.40 m from the axis of rotation and has a velocity of 6.0 m/s. What is the rock's mass if the centripetal force is 800 N?
3. What is the gravitational force between Dan (78 kg) and his slice of pizza (0.200 kg) if they are separated by 0.35 m?
