

Air Rockets Lab Report

Grading Rubric

Purpose You have a purpose statement and it accurately matches the lab.

- 5: Meets standard.
- 4: The purpose is nearly there, but it is missing something important
- 3: The purpose is not accurate or too vague.

Procedure It is easy for the reader to get an idea of what you did during the experiment and to follow the calculations.

- 10: Exceeds Standard. You have to go above and beyond to get a perfect score here!
- 8: Meets standard.
- 6: Your procedure lacks detail or it is unclear where your algebraic calculations came from.
- 4: Does not meet standard. Although this section exists, there is not nearly enough detail given.

Data All relevant measurements are provided and well-labeled. Changes made at each trial are explained.

- 10: Meets standard.
- 8: Even though you have included all of the measurements, it is hard to tell what they represent. Labeling or explanations could have been better.
- 6: Your data exists, but it is unclear what measurements are or where they came from.
- 4: Does not meet standard. Although this section exists, there is not nearly enough detail given.

Conclusion Your conclusion is complete and answers all of the questions. It thoroughly covers what you learned and what the errors might have been

- 5: Meets standard.
- 3: Your discussion of errors is vague or your discussion of what you learned does not address the overall purpose of doing the lab.
- 2: Does not meet standard. Although this section exists, there is not nearly enough detail given.

Section I: Statement of the problem

In your own words, what are you trying to accomplish in this lab? This can be brief: probably 1-3 sentences. Be as obvious and specific as you can. What are you specifically trying to do? Don't say something vague, like "The purpose of this lab was to learn about projectile motion."

Period:

This should be a narrative that explains what did with each launch and why. For each launch, list the pressure you used, the angle, and the range of the projectile (you may present this either as a narrative or in a data table.) Also, make sure to explain what changes you made after each trial and why. This explanation should include the calculations you made.
