

Name: _____ Period: _____

Mon, Aug 24

Warmup

Let's do a problem that puts together almost everything you've learned in this unit:

Consider a bicycle traveling at an initial velocity of -2.3 m/s . It accelerates constantly at a rate of -0.4 m/s^2 for 5.1 s .

- (a) Draw the velocity and acceleration vectors.

- (b) Is the bicycle traveling to the right or to the left? How do you know?

- (c) Is it speeding up or slowing down? How do you know?

- (d) Sketch the displacement and velocity graphs for the bike's motion.

- (e) Set up your knowns and unknowns and then solve for the final velocity.
