

Name:

Period:

Mon, Aug 31

Warmup

The Kinematic Equations

$$\begin{array}{lll} v_f = v_i + at & d = v_i t + \frac{1}{2}at^2 & v_f^2 = v_i^2 + 2ad \\ \text{"Old Faithful"} & \text{"The Big Chalupa"} & \text{"Ain't Got no Time"} \end{array}$$

Thinking about what we did on Friday, *explain* how you know which equation to use when you are solving a kinematics problem.
