

Name:

Period:

Mon, Oct 5 (Pd 6) / Tue, Oct 6 (Pd 1, 3)**Warmup**

A crossbow is fired at an angle with an initial x-velocity of 40 m/s and an initial y-velocity of 30 m/s. The total initial velocity of the arrow is 50 m/s.

- (a) What is the total speed of the arrow at the top of its motion? How do you know?

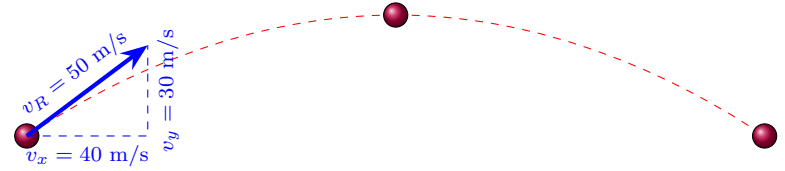

- (b) What is the total speed of the arrow just before it hits the ground? How do you know?
